

AMBIENTE MULTI RAM 2500

AMBIENTE-MULTI RAM 2500, a beach cleaning machine, is recommended for cleaning heavily polluted beaches with territorial diversity for the following reasons:

- ✓ It is a multi-purpose machine and is specially designed for cleaning every type of beach, whether with wet, dry or mixed-type sand, or with seaweed and so on.
- ✓ AMBIENTE MULTI RAM 2500 can work from both directions. Practically, this means that the machine works both when it is towed by the vehicle and when it is «promoted» by the vehicle. In both cases, the performance of the machine is equally satisfactory and the driver's visibility is perfect.
- ✓ The whole system can work frontally and this contributes to perfect cleaning, as the machine does not «step on» the garbage and it does not bury them into the sand; on the contrary, they are in front of it and they get collected more easily and with greater performance.

- ✓ AMBIENTE MULTI RAM 2500 has two buckets for litter collection, each of which has a capacity of 5.5 m³. The garbage-discharging height is 2.85 m, i.e. the machine discharges garbage quickly and without problems into a truck and not on the beach.
- ✓ AMBIENTE MULTI RAM 2500, apart from its small size (relative to other beach cleaning machines), is also very flexible and fewer movements of the machine are required for the complete cleaning of a beach, resulting in saving of time and energy.
- ✓ It deals effectively with collecting and loading of seaweed, even of those which are piled up to 1m, due to its frontal functioning and its increased cleaning speed.

	Working width	Working capacity	Working depth	Container capacity
MULTI RAM 2500 2.0	200 cm	20.000 m ² /h	0 - 15 cm	3,8 m ³
MULTI RAM 2500 2.5	220 cm	22.000 m ² /h	0-15 cm	3,8 m ³

AMBIENTE WITH BEACH CLEANING AND UPGRADING ACCESSORIES
