Digital Disk Recorders
WJ-HD316
WJ-HD309

Everything you need in a high performance camera. It will keep on the recording when you need to record again. This camera record 100% of recording time and camera zoom. It is the best for surveillance applications. It is the most "Smart" Digital Video Recorder. It can record video during power outage and the light supply control. Panasonic "Smart" Digital Video Recorder have wide range of output.

If Camera Lens and combine a night, should keep with everything you want in a high price. It will keep on the recording when you need to record again.

All Solutions in a Single Engineering Art

WJ-HD300
Series

Preliminary

The WJ-HD300 Series offers high quality picture and disk saving recording by featuring a new compression technology.

Panasonic presents the new WJ-HD300 Series with a unique new system featuring a high compression ratio of 1/40.

Under the concept of "All-in-One Solution," all the factors required for a surveillance recorder are condensed into one unit. With one single unit, unprecedented highly reliable surveillance recording is possible in a wide range of applications. Furthermore, it also features System Scalability to comply with extended user needs.

1/40 Super Compression: Proprietary Algorithm, Core Development of the WJ-HD300 Series

The new Panasonic propriety algorithm achieves high quality 1/40 compression. The image data can be compressed dramatically while maintaining uncompromising picture quality. The WJ-HD300 Series provide higher disk saving and extended capability. In addition, the new compression realizes higher ips live monitoring/playback and impressed downloading speed via network.

■ Comparison

WJ-HD316

WJ-HD309

Quality of the Picture & Disk Saving

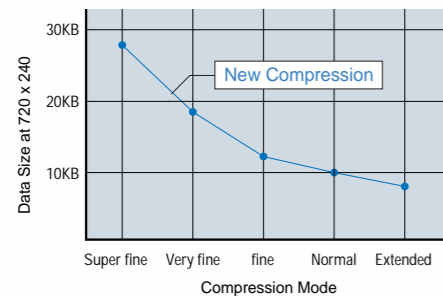

The development of Panasonic's unique data compression algorithm dramatically improves data compression while retaining high-quality video images. The result is the saving of disk space.

Advantages of the New Compression Algorithm

- 1 High picture quality by reducing block/edge noise during high compression.
- 2 High compression by eliminating redundant data between adjacent fields.

Compared to a conventional algorithm, the data compression ratio has improved approximately double.

■ Data Size and Compression Mode

New algorithm at Normal mode.

All in One Solution

By Instinct Operation

By pursuing simplicity and "by instinct" operation, the function base layout of the WJ-HD300 Series front panel is designed for ease-of-use. Eight (8)* directly connected Panasonic dome cameras can be controlled from the front panel. Also, the GUI base menu screen enables quick set up for flexible, complex operations.

(* Six (6) cameras for the WJ-HD309)

OPERATION BASE LAYOUT

GUI BASE MENU

The Latest Value Added Features

The WJ-HD300 Series is equipped with the latest value added features to satisfy your requirements such as system reliability, operation efficiency, and cost savings.

Features include:

- High-density recording: 60 ips (120 ips @SIF)
- Full rate live multi screen: 60 ips
- Independent Live/Rec./Playback/Network
- 16 independent recording profiles
- Disk partitioning: Normal, Alarm, and Copy
- Raid 5 and mirror redundant recording
- Advanced VMD (Video Motion Detector): Area, direction, and duration
- Various Network Operations: Live, PTZ control, Recording, Playback, and Downloading
- Network and serial open architecture

Featuring a full range of state-of-the-art specifications only from digital technologies surveillance is evolving and nearing perfection

High-Refresh Rate Recording

High-speed digital processing enables high-refresh rate recording — you will not miss that crucial moment.

Max. 120 image per sec. @ 360 x 290 (SIF/NTSC)
 Max. 60 image per sec. @ 720 x 240 (FIELD/NTSC)
 Max. 30 image per sec. @ 720 x 480 (FRAME/NTSC)

WJ-HD300 Series

Conventional

Full Rate Live Multi Screen

Even when images from multiple cameras are displayed on a multi-screen, you can achieve live monitoring of all cameras at full rate of 60 ips. Experience real-time, full surveillance with full-rate video images.

Multi-screen in versatile variations

(* 10, 13, and 16 screens are available only with the WJ-HD316.)

16 Independent Recording Profiles

Flexible recording setup

Independent recording settings (recording mode/recording rate/picture quality) for each 16 cameras enables flexible setup. (* 16 cameras for the WJ-HD316 and 9 cameras for the WJ-HD309.)

• **Recording mode:** Manual / Schedule / Event / Emergency • **Recording rate:** Set the ips as needed. • **Picture quality:** Super Fine / Very Fine / Fine / Normal / Extended

User-friendly setup

The user friendly GUI supports easy and smooth setup while confirming current status graphically.

GUI Setup Menu

Time Table

Recording Action PROG 1

Manual 18 ips - Schedule 12 ips - Event 32 ips

Instant Search and Playback

Filtering Search

Various parameters/filters such as time & date, camera channel, REC events, availability of text, etc. enables instant search and playback from mass recorded data.

* REC Event filter

REC mode	Emergency, Event, Schedule, Manual
Alarm mode	VMD, Terminal, Command, Video loss

Filtering Search (Example)

Filter parameters

Time & Date : 9:40-10:10
 CAM Channel : CAM1 - CAM2 - CAM3 - CAM4
 REC mode : Event
 Alarm mode : VMD - TRM - COM - LOSS

CAM1	Manual	VMD	TRM
CAM2	COM		
CAM3	VMD	LOSS	
CAM4	Manual		
CAM5	Manual	VMD	TRM

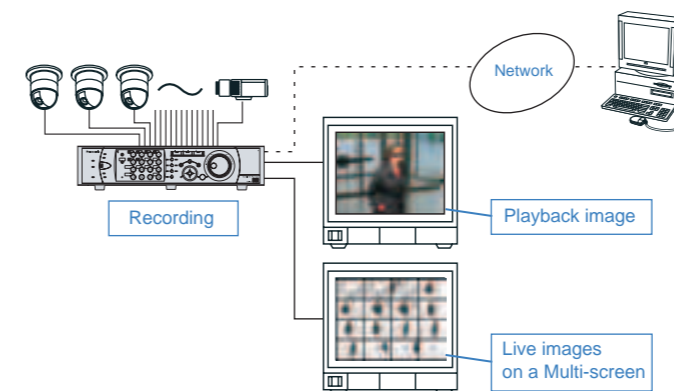

Thumbnail Display

In addition to search result by "list" "thumbnail" display is available for visual confirmation.

Live / Recording / Playback / Network Independent Performance

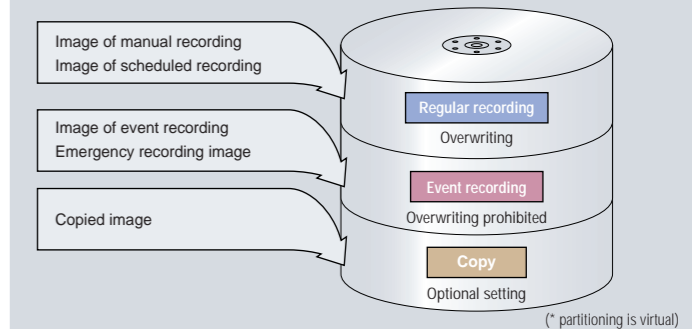

By adopting independent Live/Recording/Playback/Network processing, each operation does not effect each others performance.

Disk Management

Hard Disk Partitioning Function automatically selects the partition to be recorded.

The hard disk is divided into three partitions, "Normal Recording," "Event Recording," and "Copy." Image data will be automatically recorded to the appropriate partition according to the recording mode. For the normal recording partition, the data is overwritten when the capacity is full, for the event recording partition, overwriting is prohibited, and for the copy partition, you can optionally enable or disable the overwriting.

RAID5 / Mirroring Function

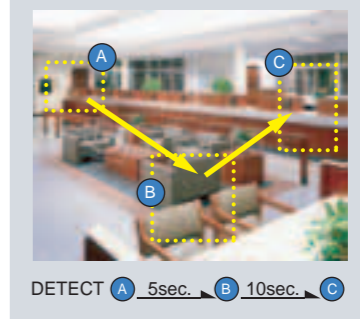

RAID5 distributes image data to multiple hard disks in the extension unit. Upon hard disk breakdown, lost data can be restored from other hard disks. In case of using one WJ-HD300 unit, mirroring function is available for data backup.

Advanced VMD

A new mode is added for sophisticate VMD detection.

DETECT DIRECTION & DURATION

Playback VMD

One VMD area can be set one playback images for motion search.

System Scalability:

Cascaded connection up to 4 main units

Up to four (4) WJ-HD300 units can be cascaded to increase maximum 64 video inputs. All 64 cameras can be switched and viewed from the master unit, while each slave unit has its own live viewing monitor.

Expandable to 4.8 TB

In addition to a total 320 GB capacity of the main unit WJ-HD316/309, one WJ-HDE300 extension unit provides up to 640 GB. With seven (7) extension units, the maximum capacity can be extended up to 4.8 TB to satisfy long recording requirements.

Built-in Network interface

Various function via network is supported such as live image monitoring through multi-screen display, camera PTZ control, recording/search/playback, downloading image/log data, e-mail notification, and setup data upload/download.
