

Digital Video Recorder with Built-in Multiplexer

- HDD recorder complete with 16 / 9-ch multiplexer
- Clear picture with horizontal resolution of 520 TV lines
- Simultaneous recording and playback at 100 IPS.
- Live picture monitoring at 800 (50 x 16ch) IPS and 450 (50 x 9) IPS for DSR-5016P and DSR-5009P respectively
- Built-in SSP controller with telemetry control
- Networking capability
- Comes with VA-SW5000 DVR management software

DIGITAL
NETWORK SOLUTIONS

All-in-one JPEG2000 recorder
Simultaneous recording and playback at 100 IPS.

Made in Japan

The product introduced here is manufactured in Japan utilizing advanced technologies and quality control.

JPEG2000 Enables Clear, Flawless Video Recording! A Multifunctional Machine with Extended Recording Time and Superior Networking Capability

DSR-5016P

An all-new DVR with JPEG2000

A finer picture with a smaller file size* offers unprecedented recording capacity. Comes with ROI, Progressive Scan and handy, versatile search functions.

* Compared to SANYO's M-JPEG model

Major features:

JPEG2000

520 TV line horizontal resolution or higher

Simultaneous recording/playback at 100 IPS

ROI for clear recording of desired surveillance areas

Telemetry control
(Camera control via coaxial cable)

All-in-one unit with built-in multiplexer

Further extension of recording time possible with an external HDD unit

Simple data backup to a disc with a disc writer

Network functions over a LAN

JPEG2000

A high compression rate is achieved while eliminating block noise and pixelation associated with the JPEG format. The new, elaborate compression method assures better picture quality and longer recording time. By using the ROI (Region of Interest) feature, it is possible to record at a higher picture quality for defined areas on the screen. Additional advantages of using JPEG2000 over JPEG format are:

Smaller image file size, enabling more images to be transmitted
Unique Progressive Scan method which allows higher refresh rate for multi-channel view at remote PCs.

Conventional picture

JPEG2000

Superior Video Recording with 520 TV line Horizontal Resolution or Higher

The DSR-5016P / DSR-5009P offers clear surveillance video recording even for a 720 x 288 pixel screen, with horizontal resolution of 520 TV lines or more and an S/N ratio of 50 dB or better.

Here's the Future of Surveillance!

All in One

DSR-5009P

Superior functionality and expandability makes this machine the ideal choice for new installations and system updates.

An all-in-one Unit with Superior Expandability that Also Serves as a System Hub

The DSR-5016P / DSR-5009P processes a variety of signals — digital, SSP, network (LAN), RS-232C — and can play the role of a system hub. It offers clear picture recording and split-screen surveillance and comes with USB terminals. Its video terminals enable multi-screen real-time monitoring at 100 IPS. And it comes with a telemetry function that offers control over PTZ / zoom cameras, including those supplied by other manufacturers. It is an all-new unit that is capable of accommodating even the most sophisticated surveillance need.

Made in Japan

SANYO's expertise in surveillance systems has all come together in this machine. It is a made-in-Japan unit that includes the latest technology.

Extended Recording Time

JPEG2000 improves picture quality without increasing the size of the data file, or maintains current quality with a reduced file size. This means you get more recording time from the same HDD capacity.

Simultaneous Recording and Playback at 100 IPS (720 x 288 pixels)

SANYO's expertise in the field has made it possible to record and playback simultaneously at a maximum speed of 100 IPS.

Exclusive Extension Units

The VA-EXH, an external HDD unit for further extending recording time, and the VA-EXD1B, a disc writer for backing-up or copying data to portable media, are both available for the DSR-5016P / DSR-5009P.

System extension units

External HDD unit VA-EXH New

The VA-EXH is an expansion unit that employs four HDD bays and enables further extension of recording time.

Disc writer (DVD+R/+RW, CD-R/RW) VA-EXD1 B New

This CD / DVD-writer is a perfect match for the DSR-5016P / DSR-5009P.

SCSI Board VZU-SCB1 New

The VZU-SCB1 enables the connection to an external RAID system. For further details on compatible devices, please contact the place of purchase.

Convenient Functions

Superior Picture Quality of JPEG2000, Quick Data Retrieval, Easy Operation, and User-friendly GUI

ROI (Region of Interest)

ROI is one of the new features included in the JPEG2000 compression method. By setting ROI, it is possible to apply better picture quality for particular areas preset on the screen. The user can set up to three different ROI areas.

Static ROI

Three ROI areas can be set with different user preferences. Enhancing the picture quality for particular areas and lowering it for unimportant areas leads to a reduction of the file size.

Active ROI

Using this function applies the ROI settings only if a motion is detected in the ROI areas.

BASIC mode (8KB)

ROI: OFF

Static ROI recoding (8KB)

ROI: MAX

Use the same amount of data ...

for enhancing the picture quality of regions of interest

The three colours indicate the settings for each area.

Camera Telemetry Control

The DSR-5016P / DSR-5009P are capable of controlling PTZ dome cameras and zoom cameras through coaxial cables, RS-485 or a LAN. It also allows this control from a PC or a controller. The unit also supports protocols of other major brands.

* SSP (SANYO Security Serial Protocol) is a communication protocol for security devices proposed by SANYO.

PC

Controller

Camera control (PTZ cameras & zoom cameras only) available from the front panel, PC or a controller

Alarm Log Search

Recordings made during a particular period are shown in a user-friendly GUI. By designating the hour, minute, month, or day of the week of alarm events, a search is performed on a log file to narrow the search and bring up the desired scene.

Alarm Log OSD Select the month

Select the week and the day

Select the ALARM SEARCH or ALARM THUMBNAIL SEARCH

Finally, select the time of images that need to be reviewed

Large Capacity, Convenient Recording, and the Possibility of Upgrading through Expansion

Supports up to 2TB HDD

The unit has two HDD bays, each supporting up to 2TB HDD to make the unit the right choice in today's trend for bigger drives. Selecting a drive of the same capacity will allow the use of the mirroring* function for data backup. For the latest available range of optional drives, contact the place of purchase.

* Mirror Recording

DSR-5016P / DSR-5009P each comes with two HDD bays. With two HDDs of the same capacity installed, it is possible to record the same video on two HDDs, thus allowing for a backup.

Longer Recording Time with an Expansion Unit

The DSR-5016P or DSR-5009P with two 300 GB HDD units (600 GB total capacity) can, for example, be connected to external HDD unit VA-EXH with 1.6 TB capacity (400 GB x 4, using Serial ATA HDD units) to further increase its storage capacity to a stunning 2.2 TB. This enables unprecedented uninterrupted recording. Adding HDD units also allows extensive storage of recorded data or data backup with mirror recording.

* The DSR-50xxP unit with VZU-SCB1 cannot be connected to the VA-EXH extension unit.

A Variety of Recording Methods

Seven different recording modes are available: Normal, Motion, Static ROI, Active ROI, Alarm, Timer, and External Timer Recording.

Multiple Backup Methods Depending on Data Size

CD-R/RW, DVD+R/+RW

The unit comes with two USB terminals located on both the front and rear panels. Using one of these terminals, it is possible to back-up data to CD-R/RW discs (Max. 640MB), DVD+R/+RW (Max. 4.6GB). The use of discs ensures secure storage of necessary video and audio data.

CompactFlash or Microdrive

DSR-5016P / DSR-5009P comes with a CF Type II expansion slot. It allows the user to export video data to a CompactFlash or Microdrive, and provides an easy way to store data or transfer it to a PC. Downloading and uploading of setup menus by use of a CF card offer an easy option for setting up additional DSR-5016P / DSR-5009P recorders.

Introduction of New Technologies and Essential Features Facilitate Consistent Surveillance

Audio Recording Available

Audio recording is available for recording speeds from 100 IPS to 1 IPS. (A 2ch audio input is provided.)

Pre-alarm Recording

The pre-alarm recording mode allows the user to save up to 15 minutes of video prior to an alarm input, offering a great advantage when analysing a situation.

Timer Recording

The timer recording mode allows the user to set eight different settings. Different settings for each day of the week and multiple settings for the same day are possible. It is also possible to specify the start / stop time or use a different recording speed.

Programmed Recording

For each of four available programs (P1 to P4), the user can specify particular cameras for recording. In addition, different recording speeds can be set for each program. These programs can also be used when making a timer recording or a pre-alarm recording.

Five Different Picture Qualities and 28 Recording Speeds Enable Flexible Settings

The picture quality is selectable from BASIC, NORMAL, ENHANCED, FINE and SUPER FINE. Together with the 28

different recording speeds, the user can select the most suitable recording mode for each situation.

Motion Sensor

DSR-5016P / DSR-5009P comes with a built-in motion sensor. Different settings can be made for each channel independently. The sensor can detect moving objects within the screen by picking up changes in brightness. The user can use this feature to trigger an alarm recording.

Alarm Functions

Using the built-in motion sensor and external sensors, the following alarm functions are available.

(1) Monitor Display Switching

An alarm signal causes the monitor to switch to the designated mode of display (16-, 9-, or full-screen). It also causes letters "SA" (for a Sensor Alarm) or "EA" (for an External Alarm) to be displayed alternately with the camera title. The user can also set each spot monitor to switch to the image from the camera from which the alarm was triggered.

(2) Buzzer and Indicator Lamp Warnings

An alarm signal triggers a buzzer sound as well as the blinking of the camera selection indicator light for the relevant camera.

AV Output Terminal on the Front Panel

These terminal can be used for supplying signals to a consumer VCR or DVD recorder, thus enabling the use of analogue video tapes and DVDs as recording media.

Live, full-motion video monitoring with split-screens

Live video images from multiple cameras can be simultaneously displayed on one monitor without interrupting motion, at the speed of 50 IPS. 16-screen, 9-screen, 4-screen, and full-screen display are all available.

Extensive Display Options

For both live picture monitoring (during multiplex recording) and playback of pictures, the user can select from 16-screen display, 9-screen display, 4-screen display, and full-screen (1-screen) display.

- Plus display
- Playback during Live Surveillance • 4-screen display
- Full-screen display • Screen position assignment
- Monitor masking

* The recording time may vary slightly depending on the complexity of the images and the presence of an audio signal.
 * The recording time will change depending on the settings for the storage area, and the availability of an optional HDD.
 Contact the place of purchase for details on increasing the capacity by adding a HDD.

Reference: 24H = 1 day, 168H = 1 week, 720H = 1 month, 8760H = 1 year

Networking Expands the World of Surveillance

Remote Control by a PC

The built-in LAN terminal enables remote control of the DSR-5016P / DSR-5009P through a PC that is connected to the network (by using Internet Explorer Version 5.0 or higher, without the need for exclusive software). It is also possible to monitor live video, playback recorded pictures, control PTZ dome camera systems, and download video/audio recordings to the PC. Limiting user access to certain functions of the machine by the use of passwords ensures the security of the system.

Network operation frame

Network camera control frame

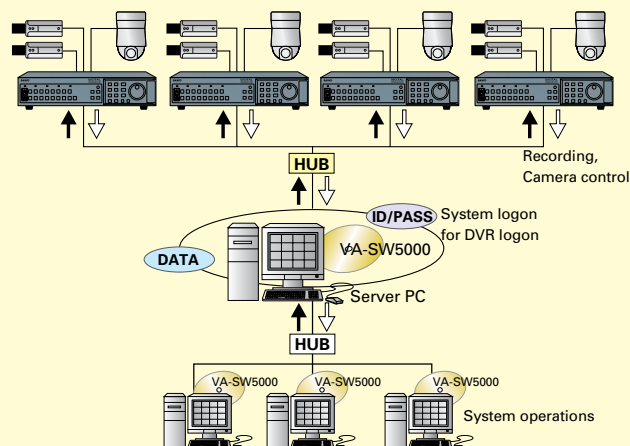

Other Features

- Triplex recording with 1-field switching
- Four-level password security lock (Level 1 to 4)
- Video loss alarm
- 30-day memory back-up
- Resume function
- Disk full alarm
- On-screen mode setting, menu languages built in: English / French / German / Spanish
- Built-in time date generator
- Six different search functions
- Alarm counter
- Auto delete
- Jog shuttle
- Forward / reverse field advance
- Automatic summer time adjustment
- Lifetime counter
- Through output of video
- Position adjustable camera titles (10-character)
- One push adjustable clock
- Push-lock terminals for easy installation

CCTV system Management Software VA-SW5000

By installing the VA-SW5000 software bundled with the unit, remote surveillance of a large-scale system can be easily accomplished from a local PC. System setup and DVR operation is also possible. In addition, it allows simultaneous access of up to eight users. The four-level security feature effectively prevents hacking and maintains the system integrity. Each user is allowed to sign-on independently and can access a maximum of 256 DVR units. Also included in the features is e-mailing any alarm event to a predefined mail address. The user-friendly GUI, which is customised the way only possible with exclusive software, ensures easy operation of the surveillance system.

System environment
