

Double Impact: Rexroth CA44. Extremely Adaptable, Easy Assembly

Valve terminal system with integrated AS-i electronics

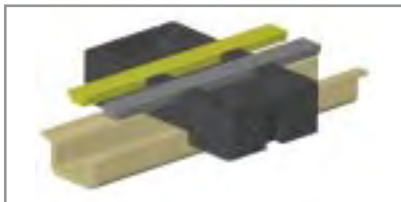

Two Become One: CA44 Valve Terminal System Integrates All the Valve Functions of Two Standard Air Boxes

CA44 is a new innovation from Rexroth that combines the benefits of a standard air box with the flexibility of a classic valve terminal system. This new product is the most compact four-valve solution with AS-i connection on today's market.

Extremely adaptable and efficient—CA44 is the intelligent solution for integrating pneumatic valves in systems with AS-i bus structures:

- Compact installation sizes
- Valve functions can be combined as desired
- Easy to install: all connections are located on one side
- Valve exchange without changing the address
- Just one AS-i address for four valve functions and four electric inputs
- Long service life, more than 100 million cycles

AS-i coupling module

An AS-i coupling module is used to connect CA44: simply plug the module onto the AS-i cable.

- Standard component
- Direct mounting onto DIN rail
- Resistant against polarity reversal

For valve functions that up until now needed two air boxes—one Rexroth CA44 can do it all.

CA44 is smaller than two air boxes and significantly smaller than all other valve terminal systems with similar functions.
